

Your business in mind.

SAGE MAS 500

IMPLEMENTATION

ASSISTED COMPANY SETUP

Simplifies implementation by guiding you through the required setup procedures and providing the appropriate data migration tools for each step.

COPY UTILITIES

Streamlines data integration processes by allowing copying of data sets through multiple companies within one system or database.

CREATE UTILITIES

Facilitates data conversion and accommodates company structure changes by enabling automatic creation of new records and default values.

DATA MIGRATOR

Streamlines data conversion from legacy systems, providing additional extraction and help tools for Sage MAS 90 migrations.

DATAPORTER

An alternative for routine data entry and data conversion that utilizes Microsoft Excel spreadsheets to enter data.

IMPORT UTILITIES

Quickly converts large volumes of data.

IMPLEMENTATION GUIDE

User-friendly guide to help you complete implementation on time and on budget.

IMPLEMENTATION PLAN

Leverages the power of Microsoft Project to help you manage specific conversion tasks and system setup requirements.

SAGE MAS 500 SOLUTIONS

- CRM and E-business
- Financials and Project Accounting
- Distribution and Manufacturing
- Human Resources and Payroll
- Customization and Integration
- Business Intelligence

Implementation with Insight

Congratulations on your decision to invest in your company's future by upgrading your system to a Sage MAS 500 ERP-class application. Sage MAS 500 provides secure, efficient, and powerful implementation utilities to ensure that you'll have everything you need to begin operating your new software immediately.

As is characteristic of all Sage Software applications, the Sage MAS 500 implementation tools have been created with maximum flexibility for optimal functionality. Data Migrator puts you on the fast track to conversion, especially when upgrading from sister Sage Software products. Data Migrator and Data Porter both use Excel to rapidly enter and validate your legacy data. Data copy facilitates data conversion across companies that work with the same records. Data creation provides the flexibility for new record generation during conversion and company structure changes. The implementation guide and best-practices project plans ensure that everyone is working as a team and that your system will be up and running with Sage MAS 500 quickly.

As intuitive as they are powerful, the import tools of Sage MAS 500 cost-effectively empower users to successfully facilitate their own conversions. Sage Software gives you the tools you need to manage data migration and conversion with insight. With a little strategic planning and Sage MAS 500 you'll have the most intelligent data foundation as a springboard for your company's future success.

Sage MAS 500

Implementation

"I expected glitches in the conversion process, but the actual import didn't take long at all...only three days with no data loss and minimal data entry. It was practically flawless."

Rodney Aguiar, Controller
DuPar & Angel Manufactured Housing

Implementation with Insight

Assisted Company Setup

- Offers flexible data setup options
- Accommodates various data entry, copy, or import methods
- Ensures data is created in correct sequence
- Shows the purpose and use of each data element
- Assigns steps to Sage MAS 500 system users
- Creates each setup step as a Microsoft Outlook task
- Tracks progress with status reports

ACS guides you through the required setup steps required and provides you with the available data migration tools for each step.

Copy Utilities

- Standardizes data across multiple companies
- Used on any size data set
- Used primarily for data conversion
- Ideal where records are the same across companies

Create Utilities

- Generates new records
- Used during conversion or when company structure changes
- Allows users to assign default values

Data Migrator

- Validates and inserts data from any system
- Leverages programmatic interfaces to rapidly insert data
- Creates error log where failed records can be easily fixed and re-run
- Imports medium to large sets of data
- Extracts data from Sage MAS 90 and Sage MAS 200 systems, converts it to Sage MAS 500 standards, and inputs it into Sage MAS 500
- Includes Sage MAS 90 and 200 help to explain data and usage differences

DataPorter

- Imports small to medium-sized data sets
- Used for data conversion or data entry
- Requires no database knowledge
- Performs data validation in real time
- Easy to use
- Supported in most screens

Import Utilities

- Used for data conversion and integration of other products
- Requires minimal database knowledge
- Uses Application Programming Interfaces (APIs)
- Imports all sizes of data sets

Implementation Guide

- Outlines the system conversion process
- Creates expectations of the role and responsibilities of everyone involved in the implementation
- Highlights system tools and resources for on-time, on-budget implementation

Implementation Plan

- Provides a step-by-step Microsoft Project plan
- Outlines the steps required to set up a new Sage MAS 500 system
- Standardizes project management practices
